MIXED PROTOCOL STUDY: Chronic Total Occlusion PCI Techniques and Outcomes

Page 1 contains native digital text for rapid indexing.

The evaluation of CTO requires multimodal imaging.
Patients undergoing interventional revascularization for Left Main (LM) or CTO disease exhibited superior clinical outcomes when IVUS guidance was documented.

SCANNED ATTACHMENT: Angiographic Run #2

IVUS MLA: 3.8 mm² | IVL Pulses: 80 | Stent: 3.5 x 28 mm

Residual In-Stent Restenosis (ISR): None.
